Context and Motivations	Approach 0000000	Evaluation ○●○	Conclusion
Practical Case:	XWiki OSS		

- XWiki mailing list (subset): 805 e-mails in 255 threads
- No Gold Standard, but obvious experts
 - XWiki team, topic-specific "heroes"
- Nodes and Relations: same than before

Results:

120 stakeholders, 216 topics, 5k terms, 75k relations

M. Vergne, A. Susi (vergne@fbk.eu, susi@fbk.eu)

Context and Motivations	Approach 0000000	Evaluation ○●○	Conclusion
Practical Case:	XWiki OSS		

- XWiki mailing list (subset): 805 e-mails in 255 threads

Context and Motivations	Approach 0000000	Evaluation	Conclusion ●○
Summary			

- Goal: expert ranking support for RE in OSS communities
- Idea: combine production-based and social-based perspectives
- Technique: compute expertise probability via MN
- Results: good support from preliminary experiment
- Future works:
 - Stronger experiment (more data, better measures)
 - Approach refinement (relations, MN functions)
 - Sources aggregation (e.g. ontologies and other models)

Expert Finding Examples

production-based:

- Mockus and Herbsleb [2002]: written code evidence to evaluate expertise in software pieces.
- Serdyukov and Hiemstra [2008]: authors' contributions in documents to infer expertise in related topics.

social-based:

 Zhang et al. [2007]: compare algos on social network built from askers/repliers identification in online forums.

Both:

 Karimzadehgan et al. [2009] exploit relationships + e-mails content between employees of a company.

17/16

Main differences with Karimzadehgan et al. [2009]

- social relationships not only for post-processing
- inference technique manage multiple topics

Stakeholders Recommendation in RE

Literature review Mohebzada et al. [2012]

- Castro-Herrera and Cleland-Huang [2010]
 - evaluate stakeholders knowledge through participation in forum
 - build abstract <u>topics</u> (term vectors) depending on messages common <u>terms</u>
 - relate stakeholders to topics they participate in
 - recommend other stakeholders to participate in new, similar topics
 - production-based: exploit data provided directly by stakeholders
- StakeNet Lim et al. [2010]
 - prioritise requirements depending on stakeholders rating
 - core stakeholders suggests others influencing the project
 - role and salience describe influence
 - built social network + apply measures to evaluate global influence
 - social-based: evaluate influence based on other stakeholders suggestions

Markov Networks (Markov Random Field)

Interpretation:

•
$$s = \top \Rightarrow s$$
 is an expert
• $r/t/c = \top \Rightarrow$ looking for experts in $r/t/c$
• $f(x, y) = \begin{cases} 0 & v_{\perp\perp}, v_{\perp\top}, v_{\top\perp} \\ w_{xy} & v_{\top\top} \end{cases}$
